Kick Plate Care & Cleaning

Stainless Steel, Aluminum, Brass & Diamond Plate Kick Plates

Stainless steel, aluminum, brass and diamond plate kick plates do not require special cleaning or maintenance.

A vinyl "skin;" which protects the stainless steel, aluminum, brass and diamond plate during shipping should be removed at the time of installation.

To clean, use mild soap and water, or a multi-purpose cleaner such as "409". We do not recommend use of any cleaners, such as Ajax or Comet, containing abrasive components that may scratch and leave a powdery residue.
